

VulnLab Laboratory Report: Phase 1

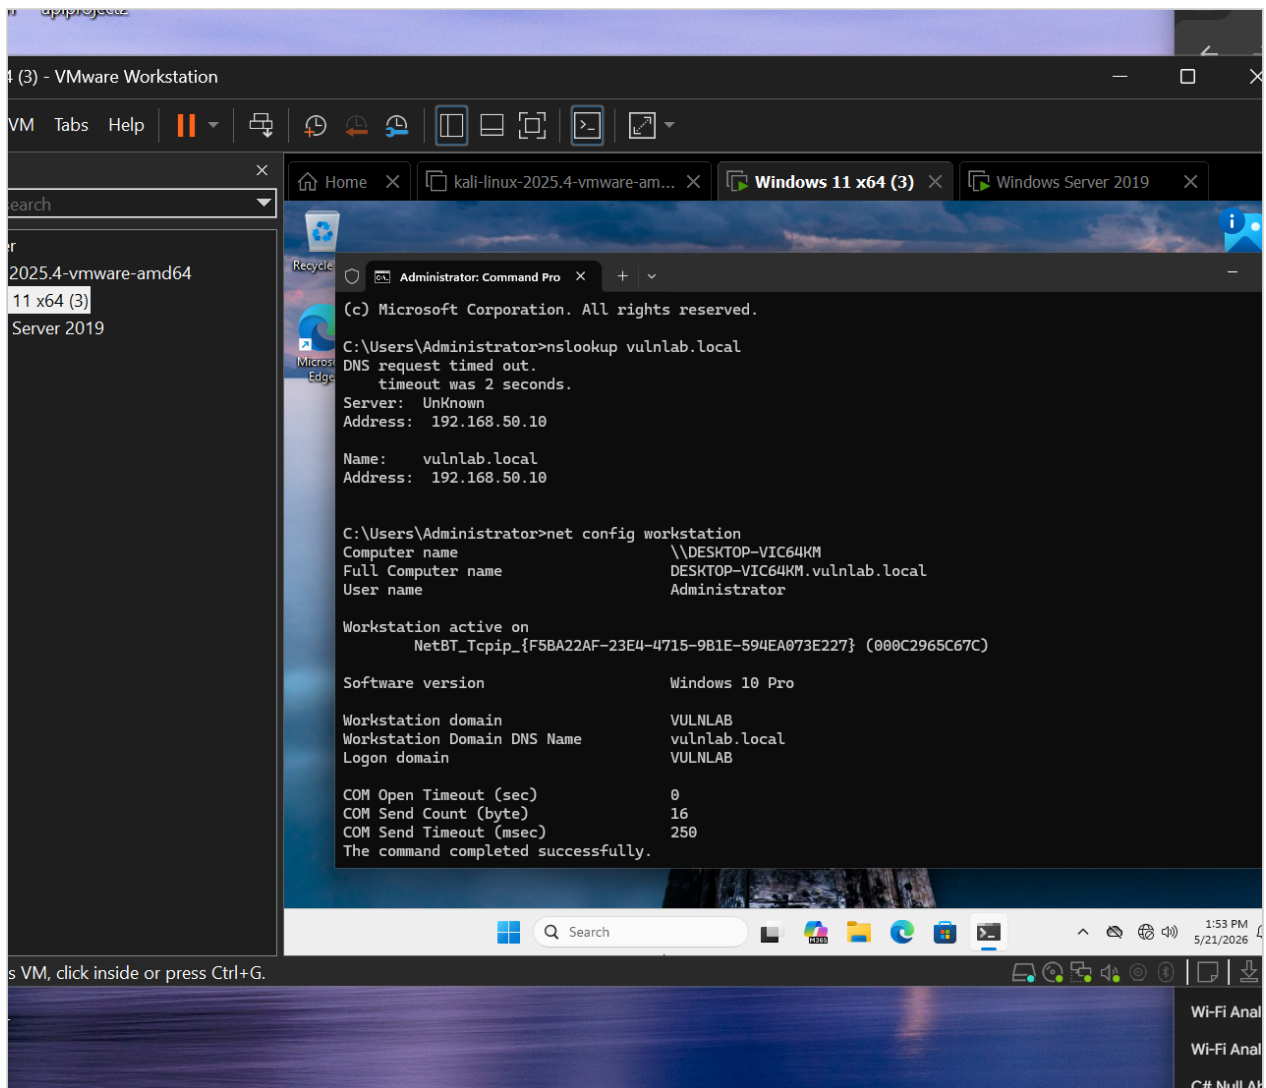

This report documents the detailed steps taken to deploy the Active Directory infrastructure.

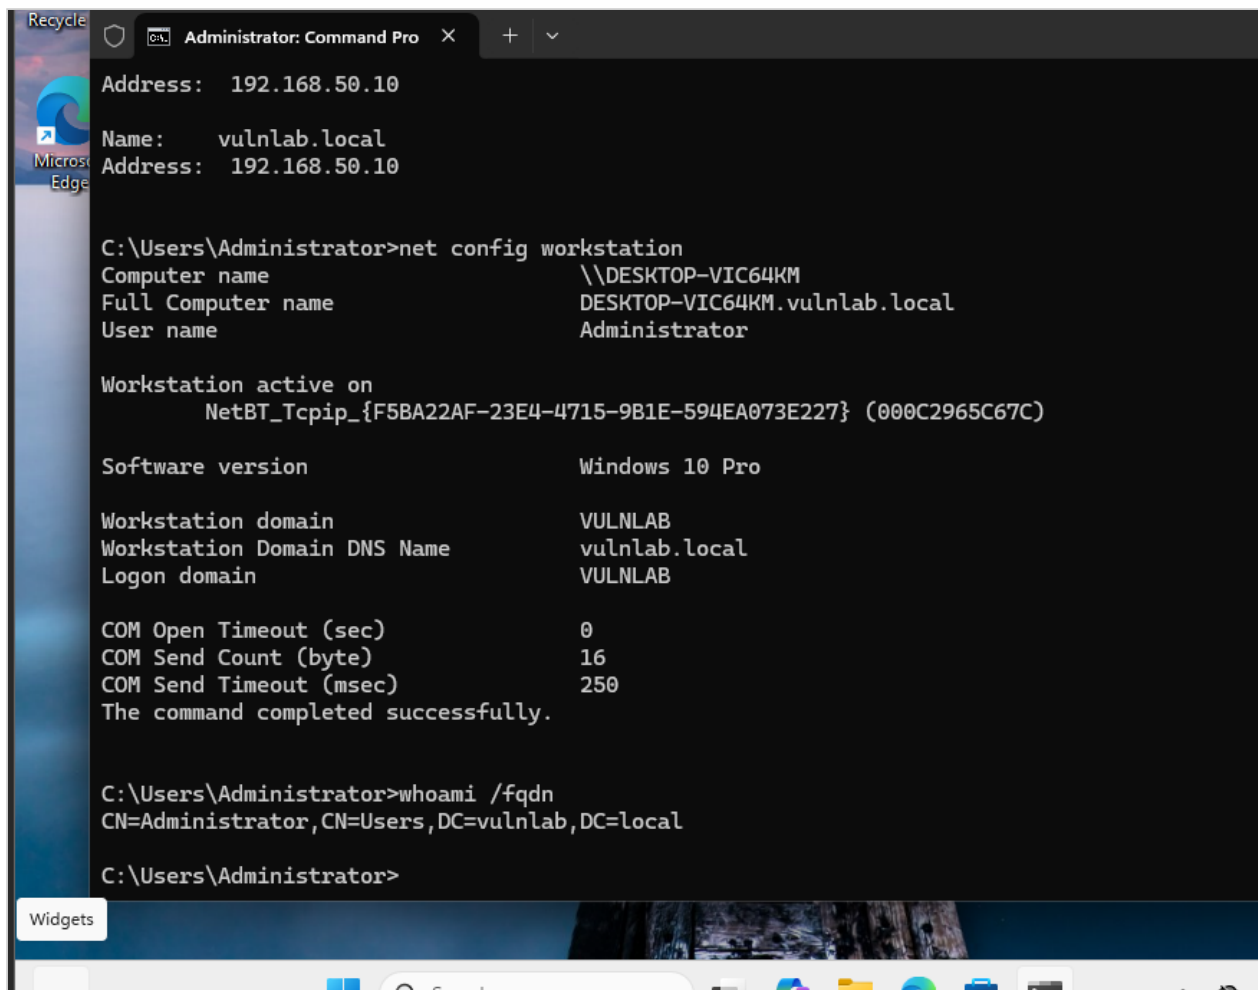

1. Detailed Execution Steps

- **Static IP Configuration:** Assigned 192.168.50.10 to the Windows Server 2019 instance.
- **AD DS Role Deployment:** Installed the Active Directory Domain Services role using PowerShell.
- **Domain Creation:** Promoted the server to a Domain Controller for the 'vulnlab.local' domain.
- **Client Network Configuration:** Set Windows 11 IP to 192.168.50.20 and pointed DNS to 192.168.50.10.
- **Domain Joining:** Successfully joined the Windows 11 client to the 'vulnlab.local' domain.

2. Verification & Sanity Check

Diagnostic tests were conducted to confirm connectivity and domain integration:

```
Administrator: Command Prompt
Address: 192.168.50.10
Name: vulnlab.local
Address: 192.168.50.10

C:\Users\Administrator>net config workstation
Computer name                \\DESKTOP-VIC64KM
Full Computer name          DESKTOP-VIC64KM.vulnlab.local
User name                   Administrator

Workstation active on
    NetBT_Tcpip_{F5BA22AF-23E4-4715-9B1E-594EA073E227} (000C2965C67C)

Software version             Windows 10 Pro

Workstation domain           VULNLAB
Workstation Domain DNS Name  vulnlab.local
Logon domain                 VULNLAB

COM Open Timeout (sec)       0
COM Send Count (byte)        16
COM Send Timeout (msec)      250
The command completed successfully.

C:\Users\Administrator>whoami /fqdn
CN=Administrator,CN=Users,DC=vulnlab,DC=local

C:\Users\Administrator>
```

3. Conclusion

Phase 1 has been successfully concluded. The lab environment is fully configured and operational for upcoming security testing.
